

Loblaw Companies Limited plan to get to **net-zero** and help fight climate change

2030

In 2016, Loblaw committed to cut its corporate emissions by 30%, a goal we met 10 years early with effort and innovation. Now, we are extending our ambitions: By 2030, we will reduce our emissions by 50% enterprise-wide, in all stores – corporate and franchise – as well as offices and distribution centres; **We will achieve net-zero emissions by 2040.**

Our enterprise commitment to be net-zero by 2040 will focus on key aspects of our footprint

refrigerants heating electricity zero emission fleet

And for the first time include important aspects of our business like our **franchise grocery stores and Shoppers Drug Mart.**

2040

NET-ZERO
by **2040**

2050

Our plan is science based and for the first time will see us tackle our **Scope 3 emissions**, like those of our suppliers, getting to net-zero by 2050.
